

Staff Instruction Manual

Using the QR document tracking system

This manual explains the full document journey inside LGU DocTrack: sign in, create a tracking slip, print and attach the QR label, receive the document, dispatch it to the next office, complete the last workflow step, and file the finished record.

For office staff, office heads and receiving personnel

Version 1.0 | 09 September 2026

Screenshot placeholder Cover or sign in page

INSERT ACTUAL APP SCREENSHOT HERE

Replace this area with a screenshot of the actual LGU DocTrack sign in page.

Using the screenshot placeholders. The boxes marked Screenshot placeholder are sized for later insertion of screenshots from the live application. Keep the caption so staff can match the screenshot to the instruction.

How to use this manual

Read Sections 1 through 5 once before handling documents. After that, use the quick reference sections for the specific action you are performing. The screen labels in this manual match the current application labels, including Create Tracking Slip, Expected incoming, Scan, Document registry, Filing & archives and the Confirm dispatch dialog.

Section	What it covers
1 Know the workspace	Main navigation, scanner station and the meaning of the document record.
2 Sign in	Account access, mobile behavior and common sign in errors.
3 Create Tracking Slip	Document details, default workflow, another workflow, custom routes and QR generation.
4 Print and attach	Printing, attaching and reprinting the routing slip.
5 Receive First Scan Dispatch Second Scan	The normal custody cycle from one office to the next.
6 Select the office	Default routing, manual destinations, optional checkpoints and detours.
7 Complete and file	Last office completion and physical archive location.
8 Exceptions and recovery	Wrong office, holds, returns, unknown QR labels and network errors.
9 Search and monitor	Office queue, incoming queue, registry, detail record, notifications and public tracking.
10 Quick reference	Status meanings and a printable handling checklist.

The document lifecycle

LGU DocTrack records custody, not just document registration. The physical folder must travel with the printed QR routing slip. Every handoff updates the same record and adds an event to the custody timeline.

Stage	Staff action	System result
Register	Create the tracking slip and save the record.	Tracking code and QR reference are generated.
Print	Print the routing slip and attach it to the physical folder.	The same identifiers remain available for reprinting.
Receive	At the expected destination, scan the QR label once.	The receiving office becomes the current office.
Process	Work on the document and use In process, Hold or Resume as needed.	The status and remarks are logged.
Dispatch	Scan the same label again and confirm the destination.	The document becomes In transit and the next office is notified.
Complete	At the final workflow office, mark the document complete.	The record becomes Completed and is ready for filing.

Stage	Staff action	System result
File	Enter a physical cabinet, drawer, shelf or folder location.	The record becomes Filed and remains searchable in the archive index.

Important. At the office where the document is created, registration already places the document in that office's custody. The first scan there opens dispatch. At the next office, the first scan is the receive action. This is why the same QR label can produce different actions depending on the saved custody state.

1 Know the workspace

After sign in, desktop users see the main LGU DocTrack workspace. The left navigation is grouped by purpose. On a phone, the scanner uses a separate receiving station layout with bottom tabs.

Area	Screen label	Use it for
Workspace	My office	See documents currently logged to your office and the actions available to your role.
Workspace	Expected incoming	See documents dispatched to your office and start receiving them when the physical copy arrives.
Documents	Document registry	Search all records available to your office, filter them and open a full record.
Documents	Create tracking slip	Register a new physical document and generate its QR routing slip.
Documents	Filing & archives	Complete the final filing step and search archived records by code, title or location.
Documents	Public tracking	Look up a tracking code or QR reference without signing in.
Insights	Notifications	Read alerts about registrations, dispatches, receipts, holds, returns, wrong-office scans and filing.
Scanner station	Scan, Receive, Dispatch, Queue	Perform mobile receiving and dispatching, see the receive queue and open the office queue.

Desktop and mobile scanner views

- Desktop navigation can be collapsed. Use Search workspace if you need to find a screen quickly.
- The mobile scanner header shows Receiving station and the signed in office. On smaller screens, use the bottom tabs: Scan, Receive, Dispatch and Queue.
- Camera scanning requires HTTPS on a mobile device. If camera permission is unavailable, use Manual entry with the printed QR reference such as QR-000418.
- The avatar and account menu identify the current user. Use Sign out when you finish using a shared receiving device.

INSERT ACTUAL APP SCREENSHOT HERE*Show the left navigation, current office and the main worklist.*

What one document record contains

Open a record from the registry or from View full record on the scanner result. The document details page is the source of truth when staff need to confirm where the physical folder should be.

Record area	What to check
Current state	Current office, next office, origin, priority, status, requester, registration time, target completion and remarks.
Custody timeline	Every registered, dispatched, received, processed, held, returned, completed, filed or wrong-office event.
Workflow progress	Numbered office steps with SLA hours and whether each step is required, current, pending or done.
Attachments	Optional files uploaded during registration. Download only when your role and office need the reference copy.
QR reference	The QR code and tracking code that must remain with the physical folder.
Routing actions	The actions currently allowed from the saved status and custody office.

2 Sign in

Use your assigned LGU DocTrack account. Do not share an account because the system records the user who registered, received, dispatched, completed or filed a document.

1. Open the LGU DocTrack web address provided by your administrator.
2. Enter your Username in the first field.
3. Enter your Password in the second field. Use the eye icon if you need to show or hide the password while checking it.
4. Select Login. If either field is blank, the page asks you to enter both values. If the credentials are rejected, the page shows Invalid username or password.
5. After a successful sign in, desktop users are sent to the home screen for their role. On a phone, the app opens the scanner station so receiving staff can begin scanning immediately.
6. If you only need to look up a document, select Track document. Public tracking does not require sign in and uses the printed tracking code or QR reference.

Screenshot placeholder Sign in screen

INSERT ACTUAL APP SCREENSHOT HERE

Show the Username field, Password field, password visibility icon, Track document link and Login button.

Sign in checks

What you see	What to do
Enter both your username and password	Complete both fields and select Login again.
Invalid username or password	Check the spelling, keyboard layout and password. If the problem continues, contact the system administrator.
Sign in to continue	Your session has expired or you opened a protected page directly. Return to the sign in page.
Camera needs HTTPS on mobile	Open the HTTPS application address and grant camera permission. Use manual entry if the camera still cannot start.

3 Create Tracking Slip

Create Tracking Slip is used at the office that registers the document. Complete the three steps in order. The document is not created until you select Register and generate QR on the last step.

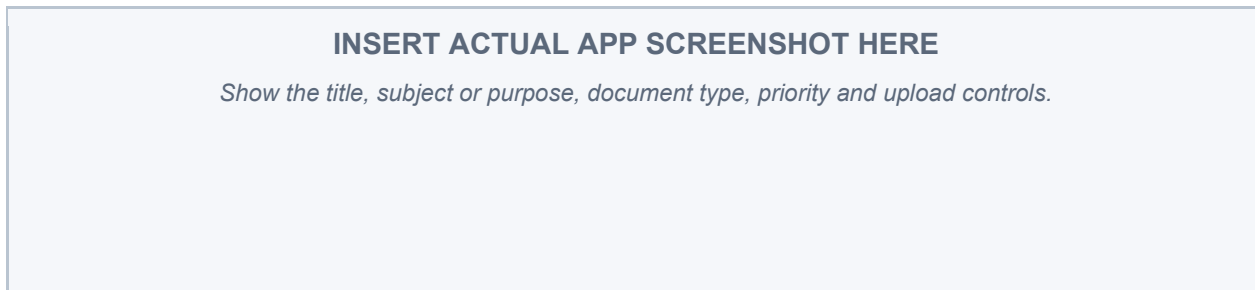

Step one document details

Enter enough information for the next office to identify the folder without opening it. The title and document type are required before you can continue.

Field or control	What to enter or select	Required
Document title	A clear title that identifies the document, for example DV - Fuel and lubricants September 2026.	Yes
Subject / purpose	A short explanation of what the document is for and why it is being routed.	No
Document type	Select the closest active document type. The type determines the default workflow.	Yes
Priority	Select Routine, Urgent or Rush. Choose the priority that matches the office handling instruction.	Yes
Upload Document	Optional scanned or digital copies in PDF, Word, Excel, JPG or PNG format. Each file must be 10 MB or smaller.	No

1. Select the document type before reviewing the route. When the type changes, the default workflow changes with it.
2. If you attach a file, confirm that it is the correct reference copy. Uploading a file does not replace the physical document or the printed QR slip.
3. Select Continue. If the title or document type is missing, the system stops you and displays an error.

Screenshot placeholder Create Tracking Slip document details

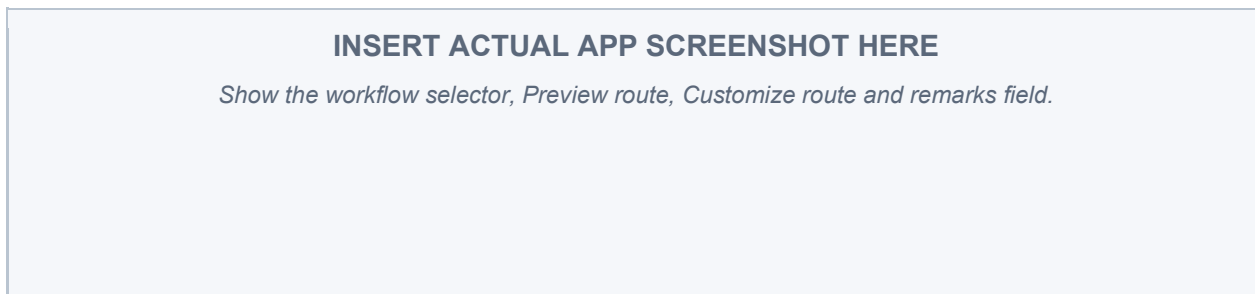

Step two routing

The routing screen determines which offices should handle the physical document and the service-level hours for each step.

4. Review the Routing workflow field. The default workflow for the selected document type is already selected.
5. Read the Preview route from top to bottom. Each line shows a step number, step name, responsible office and SLA hours.
6. If the default route is correct, leave it selected and continue.
7. If this document needs a different approved route, open the workflow list and select another active workflow. Review the new route before continuing.
8. Use Remarks optional for registration notes that the next office should see. Keep remarks factual and concise.

Screenshot placeholder Routing workflow and preview route

Default workflow or another workflow

Choice	When to use it	What happens
Default workflow	Use the normal route assigned to the selected document type.	The system preselects the route and carries the office sequence into the document record.
Another workflow	Use an approved active workflow when the document needs a different office sequence.	The selected workflow becomes the route for this document. Review every step before saving.

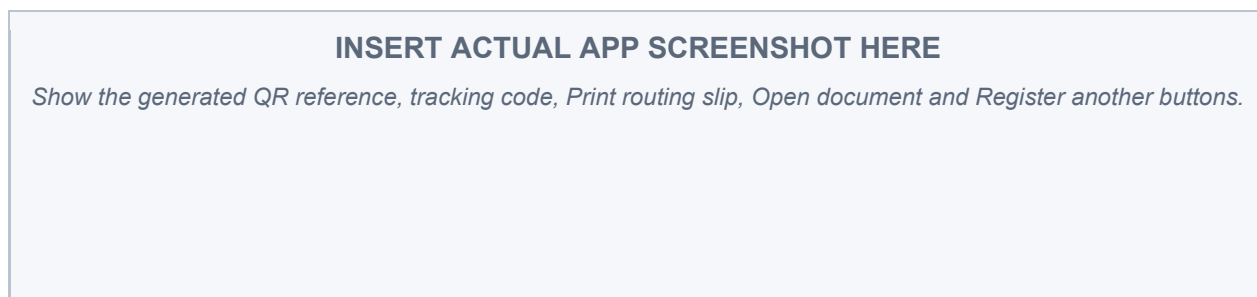

Choice	When to use it	What happens
Customize route	Use only when the document needs a one-time route change and you are authorized to make it.	You can edit step names, choose active offices, move steps up or down, remove a step or add a step. The customized route is saved with this document.

Route carefully. If the registering office is part of the workflow, it must be the first step. Required checkpoints cannot be skipped later. Optional checkpoints may be bypassed only when the system permits the destination.

Step three QR label

- Review the summary. Confirm the title, priority and any uploaded documents.
- Select Register and generate QR. Wait for the success confirmation before leaving the page.
- The confirmation page shows the tracking code, QR reference, origin office and next office. The document is now registered and the same identifiers should be used for every later scan.
- Select Print routing slip. If you need to print later, select Open document and use Reprint slip on the document details page.
- Select Back to registry when finished, or Register another to start a new record.

Screenshot placeholder Document registered confirmation

4 Print and attach

The QR routing slip is the physical link between the folder and the electronic custody record. Print it as soon as the document is registered and attach it securely before dispatch.

- From the Document registered confirmation page, select Print routing slip. A printable slip opens in a new browser tab or window.
- Check that the QR image and the printed tracking code are clear and complete. Do not use a blurred, cropped or partly printed label.
- Attach the slip to the front of the folder or to the routing cover where the receiving office can scan it without removing the physical papers.
- Keep the physical folder and the label together during every handoff. Do not create a second slip for the same document.
- If the slip is damaged or lost, open the record from Document registry and select Reprint slip. Reprinting does not create a new document and does not change the tracking code or QR reference.

Screenshot placeholder Printable routing slip

INSERT ACTUAL APP SCREENSHOT HERE

Replace this area with the actual printable slip, including the QR image and tracking code.

Before dispatch checklist. The physical document is complete, the QR label is readable, the destination office matches the saved route, and any required supporting papers are attached.

5 Receive First Scan Dispatch Second Scan

The normal handoff uses the same QR label twice at each receiving office: the first scan records receipt, and the second scan starts dispatch after the office has finished its work. The action offered by the scanner is based on the saved custody state, not on a global scan counter.

First scan receive

1. When the physical document arrives, open Scan on the mobile receiving station or select Scan to receive from Expected incoming.
2. Allow camera access if prompted. Hold the QR label inside the square on the camera view and keep it steady until the system detects it.
3. If the camera is unavailable, type the QR reference printed on the slip into Manual entry, for example QR-000418, and select Go.
4. When the document is routed to your office, the result shows Document received. Receipt is saved automatically; do not look for a second Receive document confirmation button.
5. Confirm that the physical folder is now in your custody. The status becomes Received, the current office changes to your office and the document appears in the Office queue.

Screenshot placeholder Receive scan result

INSERT ACTUAL APP SCREENSHOT HERE

Show the camera frame, Manual entry field, Document received confirmation and View full record link.

Expected incoming. This screen lists documents that another office has dispatched to you. Use its search field to find a tracking code or title, then select Details or Scan to receive. The queue refreshes periodically, so a newly dispatched document may take a short time to appear.

Process the document

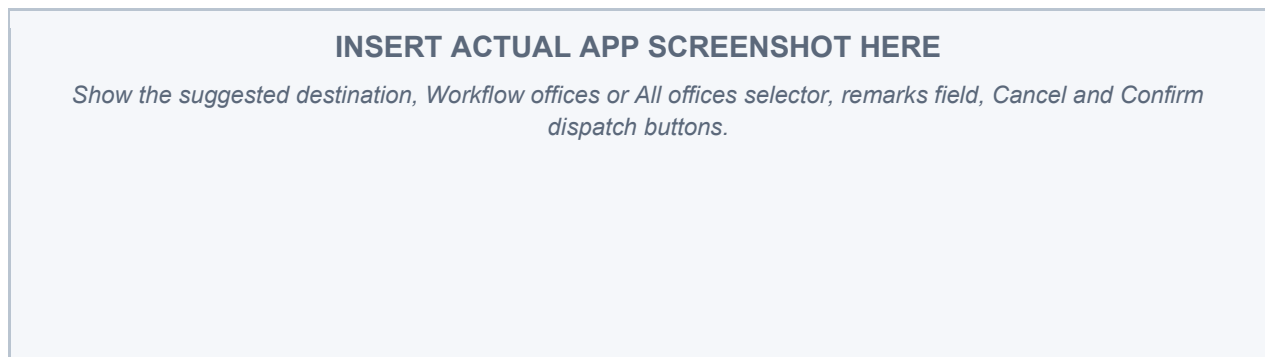

After receipt, open the record when you need to review the timeline, workflow progress or attachments. Use the Routing actions area to record the work state.

Action	When to use it	Result
In process / resume	Start work or resume after a hold.	The record shows that processing is active and the hold is cleared.
Hold	Work cannot continue temporarily.	The document is placed On hold. Remarks are required.
Dispatch	Work at this office is ready for the next office.	Opens Confirm dispatch so you can review the destination and send the record In transit.
Return to origin	The document must go back to the registering office.	Requires a reason and sends the document In transit to the origin office.

Second scan dispatch

6. After your office finishes its work, scan the same QR label again. Because the record is already in your custody, the result shows Document ready to dispatch.
7. Review the Confirm dispatch dialog. It shows the tracking code and document title and states that custody remains unchanged until you confirm.
8. Check Destination office. The system defaults to the next workflow step when one exists.
9. Add dispatch remarks if the next office needs context. Remarks are especially important for manual transfers, returns or special handling.
10. Select Confirm dispatch. The system changes the status to In transit, records the sending and receiving offices and notifies the destination office.
11. Hand the physical folder to the destination office. The electronic record is not a substitute for the physical handoff.

Screenshot placeholder Confirm dispatch dialog

Camera behavior. When the camera detects a label, it stops while the result or dispatch dialog is open. Wait for the result before moving on. Keeping the QR label in the camera frame does not create extra receipt or dispatch events.

6 Select the office

Office selection happens in two different places: the route selected during registration and the destination selected during dispatch. Use the default route whenever it matches the document's normal process.

Selecting a workflow during registration

1. On Step two routing, open Routing workflow.
2. The default workflow for the document type is already selected. Read the preview route from first office to last office.
3. If another active workflow is appropriate, select it and verify every office, step name and SLA hour before proceeding.
4. If you use Customize route, remember that the customized route applies to this document. It does not edit the reusable workflow template for future documents.

Selecting a destination during dispatch

The Confirm dispatch dialog starts with workflow offices. The destination list excludes the current office and includes active offices only.

Control	What it does	Staff instruction
Destination office	Shows the office that will receive the physical folder.	Use the suggested next workflow office unless a manual transfer is authorized.
Workflow offices	Limits the list to offices used by the document route and the suggested destination.	Use this view for normal routing.
All offices	Expands the list to every active office.	Use only for an approved detour or special transfer. Add clear remarks.
Confirm dispatch	Saves the transfer and changes the record to In transit.	Select only after checking the physical folder and destination.

Required checkpoints. A manual destination does not automatically cancel required offices. The system allows optional checkpoints to be bypassed when the route permits it, but it rejects a route that would skip a required checkpoint.

Normal three office example

Office	First scan at that office	Second scan at that office
Office A origin	Registration already puts the record in custody. A scan shows Document ready to dispatch.	Confirm dispatch to Office B.
Office B	The first scan shows Document received. Receipt is automatic.	After processing, scan again and confirm dispatch to Office C.
Office C final step	The first scan shows Document received.	After processing, scan again to review the completion action, then mark complete and file the record.

Detours and returns

- If the document is temporarily at another office, the record can show Temporary workflow detour. The message identifies the office whose workflow progress is preserved and the suggested return sender.
- To send a document back to the origin, use Return to origin from Routing actions. Enter a reason. The origin office must scan it to receive it again.
- A return does not consume a workflow checkpoint. Continue the planned workflow after the origin office receives the document.

7 Complete and file

The last workflow office must complete the electronic record before it can be filed. Scanning alone does not complete the document, and filing is not allowed before completion.

Mark the last office step complete

1. Confirm that the document has been received at the final office. The current office should be the final workflow office and the status should be Received or In process.
2. Finish the office's work. If the document is On hold, select In process / resume and resolve the issue before trying to complete it.
3. Scan the QR label again, or open the document details page and use Routing actions. The scanner should show Document ready to complete and the button Mark as complete.
4. Review the document details and workflow progress. Confirm that all required workflow steps are done.
5. Select Mark as complete and confirm the prompt if shown. The status changes to Completed and the record moves to the filing worklist.

Screenshot placeholder Final office completion

INSERT ACTUAL APP SCREENSHOT HERE

Show the final-office scan result or Routing actions with Mark as complete.

If completion is blocked. Read the message below the actions. Common causes are an unfinished required checkpoint, a document still On hold or a document that is not currently at the final workflow office. Resolve the cause, refresh the record and try again.

File the completed document

6. Open Filing & archives. The Awaiting filing area lists Completed documents that still need a physical location.
7. Find the document by title or tracking code. Open its actions if you need to review the record before filing.
8. Enter the physical File location, such as Cabinet B Drawer 2 Folder 14 or Records Room Shelf 3 Box 6. Use a specific location that another staff member can find.
9. Select File to archives. The status changes to Filed and the location is recorded in the archive index.
10. Confirm the archive index shows the tracking code, title, location, filed date and Filed status.

Screenshot placeholder Filing and archive index

INSERT ACTUAL APP SCREENSHOT HERE

Show Awaiting filing, File location, File to archives and the archive index.

After filing. The record displays Archived at the saved location. Further scans do not offer a receive or dispatch action. If someone needs to verify the record, use Document registry, Filing & archives or Public tracking.

8 Exceptions and recovery

Use the system messages to decide what to do next. Do not accept a physical folder into your office when the scan says it is routed elsewhere unless the authorized process instructs you to report the misrouting.

Situation	What the screen shows	Correct response
Wrong office	Wrong office. The message names the office to which the document is routed.	Do not accept it as received. Select Report misrouting so the event is recorded, then return the folder for correction.
Unknown QR label	Unrecognised QR label.	Check that the code was typed correctly. If the printed slip is not registered, ask the releasing office to reprint the routing slip and verify the record.
Already in transit or filed	No scan action available.	Do not scan repeatedly. Open View full record and check the current office, next office and status.
Document on hold	Dispatch or completion is unavailable.	Read the remarks, resolve the issue, enter any required remarks and select In process / resume.
Return needed	Return to origin action is available.	Enter a clear reason and confirm. The origin office must scan to receive the return.
Connection or session error	The action fails or asks you to sign in again.	Do not assume the action was saved. Sign in again if needed, refresh the record and verify the current status before retrying.
Document changed since you opened it	The record reports a conflict and asks you to refresh.	Cancel the old action, refresh the record and make the decision using the newest status.

Hold a document

1. Open the document while it is in your custody.
2. Enter the reason in Remarks / return reason. The hold action is disabled until the remarks field contains text.
3. Select Hold. The event and remarks are added to the custody timeline and the document becomes On hold.
4. When work can continue, select In process / resume. Check that dispatch or completion is available again before moving the document.

Wrong office scans

A wrong-office scan creates a warning event but does not transfer custody to the scanning office. The receiving office should not select a normal receive action for a document addressed to another office. Use Report misrouting and notify the sending or expected office according to local procedure.

INSERT ACTUAL APP SCREENSHOT HERE

Show the warning message, the routed office and Report misrouting action.

Safe retry rules

- If you do not see a success confirmation, check the document registry or full record before trying the action again.
- If a registration page fails after you selected Register and generate QR, search by title or the confirmation information before creating another slip.
- If camera detection stops unexpectedly, select the camera button to start again or use Manual entry.
- If the browser session expires, sign in again and confirm the current status before continuing.

9 Search and monitor

My office

Use My office as the daily worklist. It shows the records currently associated with your office and provides links to expected incoming, receive or dispatch work. Review the status badge and due date before acting.

Expected incoming

Expected incoming lists documents another office has dispatched to your office. Search by tracking code or title, check the From office and dispatch time, and use Scan to receive when the physical copy arrives. The receiving office selector is normally limited to your office; administrators may switch offices for support.

Document registry

Document registry is the searchable list of records available to your role. Search by tracking code, QR code, title or requester. You can also filter by status, office or document type.

Registry control	Use
Search code, title, requester	Enter part of a tracking code, QR code, title or requester name.
Status	Limit results to Registered, In transit, Received, In process, On hold, Returned, Completed or Filed.
Office	Show records by current office.
Type	Show records by document type.
Open	Open the document details page for timeline, workflow, attachments, QR reference and routing actions.
Export CSV	Download the filtered registry rows for authorized office reporting.

Document details

Use the three tabs to understand the record before you act:

- Custody timeline shows what happened, when it happened, the offices involved and any remarks.
- Workflow progress shows the route from first step to last step and identifies required and optional checkpoints.
- Attachments shows files uploaded during registration and provides Download when available.

Notifications and public tracking

- Notifications alerts the appropriate office or user when a document is registered, dispatched, received, placed on hold, returned, completed, filed or flagged as a wrong-office scan. Select the document link to open the record.
- Public tracking accepts the printed tracking code or QR reference without sign in. It shows the current office, last update, status and a public custody timeline.

10 Quick reference

Status meanings

Status	Meaning	Next usual action
Registered	Created and currently at the origin office.	Dispatch to the first next office.
In transit	Dispatched and waiting for the destination office to receive it.	Destination office scans to receive.
Received	The current office has received the physical document.	Process, place on hold, or dispatch when ready.
In process	The current office is actively working on the document.	Continue work or dispatch when ready.
On hold	Processing is paused and remarks explain why.	Resolve the issue, then select In process / resume.
Returned	A return event was recorded. The document is traveling to the origin office.	Origin office scans to receive it.
Completed	The final workflow office marked the work complete.	Enter a physical file location and file it.
Filed	The completed record has a saved archive location.	Search or track it; no further scan action is expected.

Daily handling checklist

Check	Before you finish
Registration	The title and document type are correct and the selected workflow matches the intended office route.
Label	The QR routing slip is readable, attached to the physical folder and uses the same tracking code shown in the record.
Receipt	The receiving scan was accepted at the expected office and the status is Received.

Check	Before you finish
Processing	Any hold, return or special handling has clear remarks.
Dispatch	The destination in Confirm dispatch matches the physical handoff and the status is In transit.
Completion	The final office marked the document Completed only after required checkpoints were finished.
Filing	The physical archive location is specific and the record shows Filed.

When to ask for help

Contact your office head or system administrator when an office is missing from a workflow, a document is routed to the wrong office, a user cannot sign in, the QR label is unreadable, or the system repeatedly rejects an action after you have refreshed the record. Include the tracking code, the screen message and the last successful action.

Remember. One document, one tracking code, one QR reference and one custody timeline. Use the saved status and current office as your guide at every handoff.
